Modeling Scenarios

Because air quality analysis is based on maximum daily emissions, the nine projects were reviewed and the phases, or phase overlaps that would result in the maximum daily onsite equipment usage and haul trucks were modeled. Additionally, as greenhouse gas emissions are based on annual emissions, the construction year that would result in the maximum annual emissions was also modeled. Due to the type of project and the dependance of one construction project on the next, there will be no overlap in the individual phases. These assumptions are detailed in the following pages.

To determine maximum emissions for the entire construction project, the maximum daily emissions represent 1 percent of the maximum annual emissions. Therefore, in order to determine total criteria pollutant emissions from the project, daily emissions would be divided by 0.001.

OCSD - Biosolids Master Plan EIR
Construction Assumptions

For the greenhouse gases, a maximum annual year was provided. This maximum annual year represents 10 percent of the total project construction emissions. Therefore, to determine total project construction emissions, the maximum annual emissions are multiplied by 10.

Construction Scenarios

Note: While construction would begin in 2018 and continue through 2040 and construction equipment will become more efficient as regulatory requirements become more stringent, as a conservative estimate of emissions, the standard 2018 equipment fleet is used. This is becasue it is not known at what point during the construction activities equipment would be changed out and newer equipment introduced. For example, if a dozer is used in 2018 for one project and the piece of equipment is still onsite when a projects in 2019 and 2020 needs a dozer, it is likely the same dozer would be used.

Construction scenarios were provided for Max Daily and Max Annual conditions as follows:

	Max Daily	**Max Annual**	
Total Graded area	2	3	acres
Total Excavation[1]	4,700	56,534	cubic yards
Total Grading Export[2]	897	48,400	cubic yards
Export Trucks	60	6,455 [3]	Trucks (round trips)
Total Import[4]	178	3,200	cubic yards
Import Trucks	12	214	Trucks (round trips)
Employee Trips[5]	120	37,440	Trips (one-way)
Delivery Trucks[6]	10	600	Trucks (round trips)

1 Total excavation is assumed to be 50% of the estimate grading/excavation time of 180 days. A maximum of 3 average days of excavation is assumed to occur as the maximum day. A maximum of 2 average years of excavation is assumed to occur as the maximum annual.

2 Total export for the Max Annual assumes 40% of the estimated total for the TPAD project (121,000 cubic yards)

3 Total trucks account for grading and demolition material.

4 Total import is assumed to be 25% of the estimate grading/excavation time of 180 days

5 Maximum daily employee trips would occur during building construction, assumes 99 daily trips per demo,grading, and building construction phases

6 For annual assumes 4 trips per day during building construction, demo, and grading phases.

Construction Assumptions

Paving

While paving will not occur at the same time as the other phases of daily or annual construction, in order to conservatively account for the emissions that would occur from asphalt paving, paving is anticipated at a maximum of 0.5 acres per day and 5 acres per year max. Construction equipment is not modeled becasue they would be the same/similar to the equipment already being accounted for and this analysis accounts for the fugitive VOC emissions from paving.

Architectural Coating

While the architectural coating phase will not occur at the same time as the maximum daily or annual phases being analyzed. The fugituve VOC emissions from Architectural coating of the warehouse is being calculated and added to the worst case day/year in order to conservatively estimate the emissions of ROGs. Onsite equipment is not modeled because it would be accounted for as part of the current max day/max annual scenarios above.

Construction Max Daily and Max Annual scenarios are modeled separately

PM10 and PM2.5 Fugitive emissions report the "Mitigated" scenario because the "Mitigated" scenario represents emissions with the incorporation of SCAQMD Rule 403 which is a requirement of construction within SCAQMD Jurisdiction. Rule 403 assumes watering 3 times per day.
